Roxil Wood Preserver

**Roxil Wood Preserver** is a liquid wood preservative that penetrates deeply into softwoods and defends them against mould, rot, fungal attack and woodworm infestation.

The powerful brush, roller or spray applied formulation is designed specifically for providing protection before the application of weatherproof coatings for an unbeatable combined performance.

- Protects against mould, rot, fungal attack and woodworm
- Odourless formula
- Easy brush or spray application
- Ideal undercoat for weatherproof coatings & paints
- Tested to European standards EN 152, 113 and 46-1

**Application Instructions**

1. Clean the surface to be treated, ensuring that it is clear of debris. If the surface is affected by biogrowth it is recommended to use **Roxil Wood & Patio Cleaner**.

2. Apply directly to the treatment area with brush or spray. 2 -3 coats may be required depending on the porosity of the substrate.

3. Allow the coating to dry for at least 24 hours before overcoating with a suitable weatherproof paint.

**Appearance** | White liquid
---|---
**Recipe Type** | Liquid, water-based
**Density** | 1.0 g/cm³
**Size(s) & Packaging** | 5 litre and 1 litre jerry cans
**Coverage (1)** | 1 litre covers 8 m²; A 5 litre pack covers 40 m²
**Storage** | Store product in tightly closed original container at temperatures above 0°C and below 30°C. Keep out of reach of children
**Shelf Life** | 24 months
**Active Ingredient(s)** | Propiconazole, Permethrin, IPBC
**Effective Against** | Wood destroying, wood discolouring fungi and woodworm
**Efficacy Test Data** | EN 152, EN 113+84 and EN 46-1
**HSE Number** | 10044
Rot and Fungal Attack

Most buildings and structures that use wood as part of their construction are at risk from rot and fungal attack. These problems can severely reduce the structural integrity of a construction.

**Roxil Wood Preserver**'s deeply penetrating and powerful formula will not only prevent rot and fungal attack in wood but will also prevent further progress of existing cases.

Woodworm Infestation

Woodworm infestations can be active long before any visible symptoms, such as exit holes, begin to show. The ideal place for woodworm to nest is warm and damp wood. The infestations can be extremely destructive.

**Roxil Wood Preserver** penetrates into the wood and kills any woodworm lavae that are present. It will also prevent future infestations.

Mould and Algae Growth

Mould and algae growth occurs in wet, shady and warm areas with high humidity. Wood that is subject to mould and algae growth for long periods of time can be permanently discoloured.

**Roxil Wood Preserver** stops mould and algae growth and keeps the wood surface looking clean. For even more complete protection, overcoat with **Roxil Wood Protection Cream**.
Precautions

Read instructions and health and safety data sheet (available upon request) before use.

Keep out of reach of children and animals. Unprotected persons and animals should be kept away from treated surfaces until dry.
