WOOD PROTECTION CREAM

External Timber Protection

Keep Wood Looking Good for Longer

The **Roxil® External Timber Protection Range** has been specifically designed to protect external softwood and weathered hardwood timbers from the damaging effects of moisture. It enables users to clean, protect and maintain outdoor timbers without causing damage or changing their natural appearance.

Prepare

Roxil® 100 Wood & Patio Cleaner Roxil® 200 Surface Biocide Concentrate

Roxil® 100 and **200** are liquid based biocidal cleaners for exterior surfaces such as decking, fencing, sheds and patios. The powerful formula allows for easier cleaning of surfaces. Simply apply and wash off with water. It is an effective non-destructive alternative to acid-cleaning or pressure washing.

Protect

Roxil® Wood Protection Cream

Roxil® Wood Protection Cream is a silicone cream emulsion that weatherproofs the surface of softwoods and weathered hardwoods from the effects of moisture such as degradation, warping and mould or algae growth. A single application will provide long-lasting protection^[1] on outdoor wooden structures from the harmful effects of moisture, with maintenance.

^[1] Based on accelerated QUV aging and good maintenance

How and Why to Apply

Prepare

All prior coatings should be completely removed and, if necessary, the wood should be sanded down to provide a clean, sound surface. It is recommended to clean all wood surfaces with **Roxil® 100 Wood & Patio Cleaner** prior to the application of **Roxil® Wood Protection Cream**. After 24 hours rinse the surface with fresh, clean water and allow to dry completely.

1

Apply

Roxil® Cream should only be applied in temperatures between 5 – 30°C and not when heavy rain is forecast. Apply a thin even coat by brush or roller. Care should be taken to ensure **Roxil® Cream** does not splash onto glass, paintwork, plants, etc. Any splashes can be easily wiped away, with a cloth or paper towel.

2

Maintain

The service life of **Roxil® Cream** can be enhanced by regular maintenance, especially on horizontal surfaces where there is an increased contact time with water. On occasion it is expected that a small amount of organic growth may settle on the surface, this can be removed by gentle cleaning using **Roxil® 100 Wood & Patio Cleaner**.

3

After application, **Roxil® Wood Protection Cream** penetrates into the wood over a period of a week, after which the wood will return to its natural colour and form a water repellent barrier. **Roxil® Cream** is easy to apply and lasts longer than competitor products, with only a single coat.

Why Use a Wood Protector?

Deteriorated Appearance

Wet weather conditions can cause wood to become degraded and dirty in a short space of time due to the effects of moisture. This degradation is accelerated on upward-facing areas that are in shade or subject to high levels of rainfall.

An application of **Roxil® Wood Protection Cream** will make the surface of wood water-repellent. This will protect it from moisture ingress, keeping the wood cleaner and reducing the rate of discolouration.

Swelling and Warping

When wood takes on moisture, it expands. Wooden structures that contain excess moisture can buckle and break, due to warped or broken sections of moisture-damaged timber.

Roxil® Cream's powerful formula greatly reduces moisture ingress, minimising the expansion that causes wood to warp or split. This increased structural stability can extend the life of softwoods and weathered hardwoods.

Mould and Algae Growth

Mould and algae grow in wet conditions. Growth mainly occurs because the surface of the wood is damp. It can be more severe on flat and horizontal surfaces, where rainwater can collect. Repeated instances can permanently discolour wood.

Treatments must be chosen carefully as some natural oils can actually increase the likelihood of biological growth. Maintain regularly using **Roxil® 100 Wood & Patio Cleaner** to ensure your wooden structures look good for longer.

Wood Preservers for Extra Protection

Wood is an extremely versatile and attractive construction material, making it ideal for exterior structures such as fences, sheds, decking, furniture and more.

If softwoods are left unprotected from the outdoor elements they not only risk deterioration from moisture, mould and algae growth – but also from rot, fungal attack and woodworm infestation.

A **Roxil® Wood Preserver** or **Roxil® Coloured Wood Preserver** pre-treatment significantly extends the life expectancy of exterior wood. These ready-to-use liquid wood preservers penetrate deeply into softwoods and defend them against mould, rot and fungal attack.

NOTE: when applying Roxil® Wood Preserver to hard or planed wood, the surface should be washed down with clean water after 24 hours and prior to applying Roxil® Wood Protection Cream

Proven Results

Cladding Tests

Roxil® Wood Protection Cream can be used on timber cladding to maintain its appearance for longer. The cream also reduces extractive bleed, biological growth and warping. The effectiveness of **Roxil® Cream** will depend on the absorbency of the wood it is applied to.

Water Uptake of Roxil® Treated and Untreated Wood Samples After 24 Hours

For very absorbent cladding wood such as Western Red Cedar, **Roxil® Cream** will reduce water uptake by up to 85%. Less absorbent wood such as Oak will also benefit from an application of **Roxil® Cream**. However, the reduction in water uptake will be less marked.

TREATED

Imported Western Red Cedar Homegrown Red Cedar Douglas Fir Siberian Larch Oak

UNTREATED

Imported Western Red Cedar Homegrown Red Cedar Douglas Fir Siberian Larch Oak

Protecting Fence Posts

Roxil® Cream can be used to protect fence posts and end grain wood in ground contact from the effects of moisture. This delays degradation from rot to ensure a longer lifetime.

Mass Change After Ground Contact – Mass Loss Indicates Degradation

Roxil® Wood Protection Liquid

Roxil® Wood Protection Liquid offers the protection of **Roxil® Wood Protection Cream** in sprayable form. Use a 5-litre pressure spray to quickly cover large areas like fences or sheds in 2 coats. While **Roxil® Liquid** offers quick application time, **Roxil® Cream** gives even coverage and lasts longer with only a single coat.

Precautions

Read instructions and health and safety data sheet (available upon request) before use. Keep out of reach of children and animals. Unprotected persons and animals should be kept away from treated surfaces until dry.

Further Information
