

DRYZONE[®]

Dryzone[®] 100 Mould Sanitiser HSE No: 10511

MOULD REMOVAL AND PREVENTION KIT

KIT INCLUDES:

- 2 × MOULD ELIMINATOR SPRAYS
- 1 × MOULD SANITISER SPRAY
- PROTECTIVE GLOVES
- MICROFIBRE CLOTH

ELIMINATE MOULD

AND KEEP IT AWAY

PROVIDES A PROTECTIVE SHIELD FROM MOULD AND MILDEW

DRYZONE®

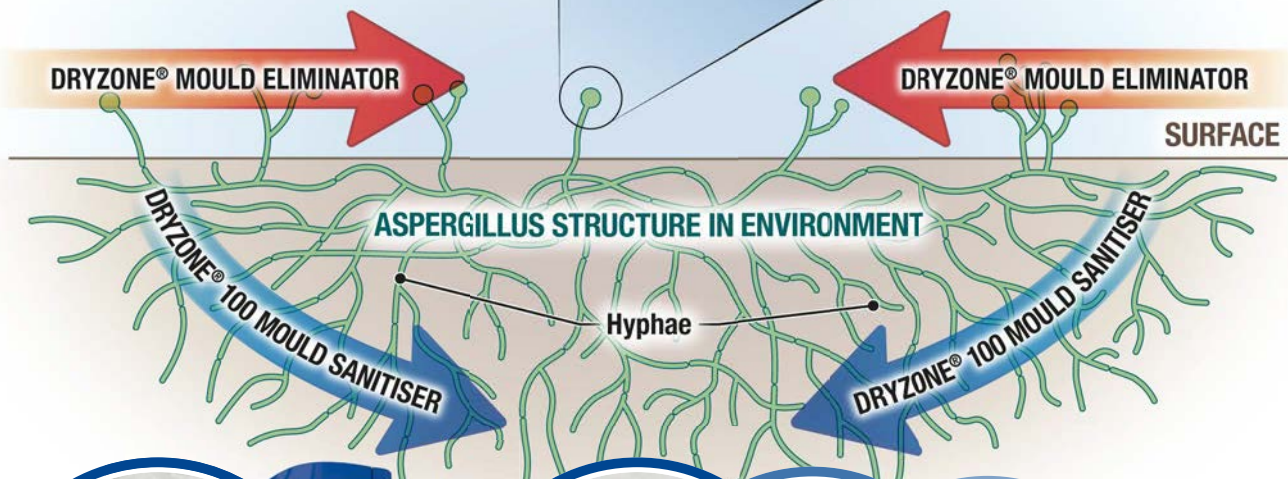

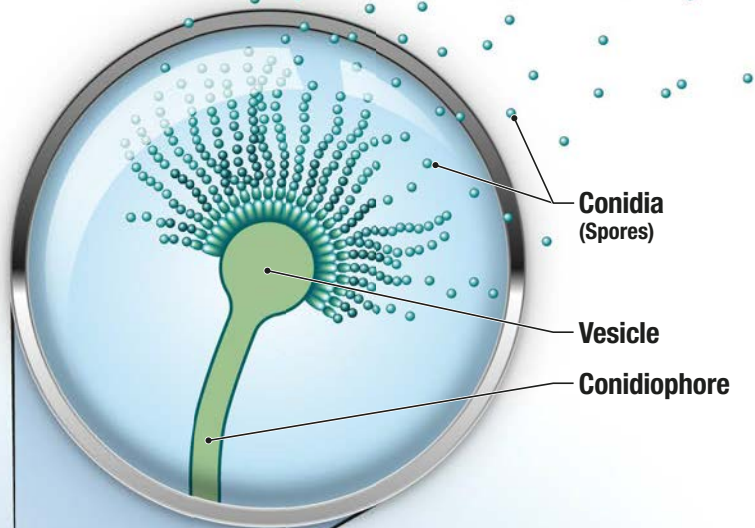

MOULD REMOVAL AND PREVENTION KIT

How the Kit Works

Mould and mildew can be a nightmare. The unsightly appearance, musty smells and stubborn staining can transform a beautiful space into a dank and unhealthy environment. The diagram above shows a close up of a typical mould that commonly affects damp walls and surfaces.

The Dryzone® Mould Removal and Prevention Kit provides you with all the equipment you need to easily get rid of mould and mildew and keep it away.

- Dual-action system which both removes mould and controls regrowth
- Fast-acting – typically less than 3 minutes for mould removal
- Effective on a broad range of bacteria and fungi
- Removes staining as well as surface mould growth
- Ideal for work in damp environments

This material and their containers must be disposed of in a safe way. Do not empty into drains. Do not contaminate ground, waterbodies or watercourses with chemicals. Once the container is empty, rinse out onto the treated surface prior to disposal. The empty container is suitable for recycling. For full application instructions, refer to the technical datasheet which is available upon request from Safeguard at: www.safeguardeurope.com

DRYZONE®

MOULD REMOVAL AND PREVENTION KIT

Product Description

Dryzone® Mould Removal Kit is a two part mould treatment pack that removes mould and protects against further colonisation. Taking a dual action approach allows for rapid cleaning using the **Dryzone® Mould Eliminator** and longer-term fungicidal protection using the **Dryzone® 100 Mould Sanitiser**. Both products are effective in their domain allowing a mould infestation to be removed and treated in under 30 minutes with little or no scrubbing required.

Application Information

Start by removing any loose material from the surface before spraying **Dryzone® Mould Eliminator** liberally onto the affected area. Wear the included protective gloves and avoid spraying near the face. Care should be taken to ensure that **Dryzone® Mould Eliminator** does not splash onto household plants or soft furnishings.

*Note: **Dryzone® Mould Eliminator** may discolour coloured bathroom grout. If this is of concern, carry out a test application in a small inconspicuous area and leave for 24 hours before carrying out full treatment.*

Dryzone® Mould Eliminator should start to work straight away. When using the product around a shower or bath you may want to rinse off when the mould is no longer visible. When used on painted surfaces, use the microfiber cloth to dab the surface to remove excess material.

Ensure **Dryzone® Mould Eliminator** has been rinsed or wiped away prior to applying **Dryzone® 100 Mould Sanitiser**.

Spray down the affected area using **Dryzone® 100 Mould Sanitiser**. Apply 1 litre of product per 5 m² of surface.

The coverage may vary depending on the surface. Take the appropriate precautions as outlined above for the **Dryzone® Mould Eliminator**.

Leave **Dryzone® 100 Mould Sanitiser** for 1 hour for maximum effect prior to washing off. For best results wipe the area with the microfiber cleaning cloth provided in the kit to remove any remaining spores from the surface. Apply the **Dryzone® 100 Mould Sanitiser** every 6 months or when mould reappears.

*Note: **Dryzone® 100 Mould Sanitiser** can be used in isolation on delicate surfaces affected by mould as well as a pretreatment when a surface is being painted. Testing a small inconspicuous area is recommended before full treatment.*

How Dryzone® Mould Eliminator Works:

Like most cleaners **Dryzone® Mould Eliminator** acts on cosmetic aspects associated with mould. It quickly eliminates the pigments created by the mould and within minutes the mould will appear to have vanished. It is important to note that although the mould will appear to have gone, the organism may still remain in the substrate. Without using **Dryzone® 100 Mould Sanitiser** to fully destroy the mould organism and its surrounding spores, the mould will start producing pigments again. This will first become noticeable as a "halo" of mould around the previously treated area, this can occur within a matter of days or weeks.

How Dryzone® 100 Mould Sanitiser Works:

Dryzone® 100 Mould Sanitiser is the key to controlling the regrowth of the mould. The fungicidal formula will destroy the mould organism and spores. This approach offers a longer-term solution to mould infestation.

DRYZONE®

MOULD REMOVAL AND PREVENTION KIT

Fast-Acting Mould Removal with Dryzone® Mould Eliminator

Dryzone® Mould Eliminator is a fast-acting bleach-based cleaner designed to remove mould and mildew from bathroom, kitchen and household surfaces. It is sprayed directly onto mould and mildew affected surfaces where it will typically yield astonishing visual results in less than three minutes! It is then washed away to reveal a clean surface, free of visible mould, mildew and staining.

Long-Lasting Dryzone® 100 Mould Sanitiser Keeps Regrowth at Bay

Just cleaning away mould and mildew is often not enough to ensure it won't grow again. This is why **Dryzone® 100 Mould Sanitiser** is included for use after cleaning. It is a biocidal sanitising solution that is designed to kill mould spores and prevent the regrowth of mould on cleaned surfaces. Periodic application will keep bathroom, kitchen and household surfaces free from mould and mildew.

Part of the Dryzone® System Condensation Products Range

The **Dryzone® Mould Removal and Prevention Kit** is part of the range of condensation products within the Dryzone® System. It is ideal for use before the application of Dryzone® Mould-Resistant Emulsion Paint or paints and grouts mixed with Dryzone® Anti-Mould Additive. It is also ideal for maintaining surfaces that have already been treated with these products.
