

# ProBor® 20.1 Wood Preservative Gel

## Product Description

**ProBor® 20.1 Wood Preservative Gel** is a dual action wood preservative and surface biocide. It is used to preserve wood from wood-rotting fungi and wood-destroying insects. It can be used for the treatment of large sectional timber and roof spaces. It is also effective against wood-boring insects, and is particularly useful when treating Deathwatch Beetle. It can also be used as a surface biocide for the treatment of moulds, algae and fungi on internal surfaces such as masonry.

## Benefits

- Dual purpose
- Solvent-free
- Ready for use
- Excellent penetration
- Low odour

## Properties

<b>Appearance</b>	Clear liquid
<b>Size(s) &amp; Packaging</b>	5 litre kegs
<b>Coverage</b>	Brush or Roller: Apply 1 litre per 2 – 2.5 m <sup>2</sup> of surface Injection: Until refusal
<b>Storage</b>	Store above 10 °C in dry conditions in original container. If the temperature falls below 10 °C there is a risk that crystals may form in the product. If this occurs, the product should not be used. Store in a safe place, keep out of reach of children. Keep away from food, drink and animal feedstuffs.
<b>Shelf Life</b>	12 months
<b>Active Ingredient(s)</b>	Boric Acid (24 %w/w) Alkyl (C12 – 16) Dimethyl Ammonium Chloride (BACS) (2.5 %w/w)
<b>HSE Number</b>	10633
<b>Re-entry Time</b>	48 hours or until surfaces are dry

## Application Information

### Preparation

The Control of Substances Hazardous to Health (COSHH) regulations apply to the use of this product at work. Ensure that the operator has read the relevant safety data sheet and is wearing the appropriate safety equipment. Always read the label.

### Application

**ProBor® 20.1** is intended for application to unpainted, unvarnished timber. All timber surfaces should be cleaned of dust as far as practically possible.

Apply a generous brushed coat, taking special care to ensure that end grain, corners, joints and crevices are treated. Brush apply to surfaces exposed by cutting after treatment.

Large timbers may need more than one coat or an additional treatment with ProBor® 50.1 Wood Preservative Paste. On dusty timbers it is recommended that the timber is ‘wetted’ by the application of sprayed water, this will stop the gel from ‘balling’.

### Surface Biocide

**ProBor® 20.1** is intended to act as a sterilising fluid for internal surfaces against mould, algae and fungi.

When used on masonry affected by dry rot (*Serpula lacymans*) particular attention should be taken. It is recommended that before undertaking a dry rot treatment that operators are familiar with either the Safeguard publication, “Dry Rot and its Control”, or BRE Digest 299, “Dry rot: its recognition and control”, where details of appropriate treatments are laid out.

Apply **ProBor® 20.1** at a rate of 1 litre per 2 – 2.5 m<sup>2</sup> to surfaces using brush or roller; more than one application will be required to achieve the required coverage.

## Other Information

For professional use only. For use only as a wood preservative. For full health and safety information consult safety data sheet. This product is approved for use under the Control of Pesticides Regulations (1986) for use as directed. HSE No.10633. Use pesticides safely. Always read the label.
